About This Service Pack

The 2007 SP4 release of your Effects or Editing application is available to all users currently on support, including users on subscription.

- If you have a valid 2007 license, you are entitled to download and install this service pack, which provides several fixes and improvements.

  No new license is required for the service pack.

- If you are on subscription and have already installed and licensed the SP3 Extension 1 release, all extension features remain available to you with the SP4 release.

  No new extension license is required for this services pack.

- If you are on subscription and have not already installed and licensed the SP3 Extension 1 release, you can install the SP4 release but you must also request and install the supplementary extension license in order to enjoy the many new and exciting extension features.

  See "Licensing Requirements" on page 8.

Upon launching your Effects or Editing application the splash screen will display the product version, which is either SP34or SP4 Extension 1.

About These Release Notes

The chapters in this document provide important information pertinent to Autodesk® Fire® 2007, Autodesk Smoke® 2007, and Autodesk Backdraft® Conform 2007 SP4.

Chapter 1: Release Information — Provides information about related documentation, compatibility, and contacting customer support.

Chapter 2: System Information — Provides infrastructure and hardware-related information.

Chapter 3: User's Guide Addendum — Provides new information that was released after the *User's Guide* went to print and applies to both Service Packs and Extension users.

Chapter 4: Installation Documentation Workflows — Provides common installation workflows, such as reinstalling your entire system and upgrading your operating system.

New Information for This Release

The following table highlights new information related to the 2007 Service Pack 3 release.

Item	Page
Licensing Requirements	8
Cleaner XL 1.5.2 Updater Available	15

Revision History

This document is updated as necessary throughout the life cycle of the release. This section describes all additions and modifications made to this document since its initial publication. The latest version of this document is available at *http://www.autodesk.com/discreet-documentation*. It is recommended that you always refer to the most recent version, to ensure you are working with the most up-to-date information.

NOTE: Minor changes, such as typographical errors or changes to names of sections, that do not have an impact on the technical content of the guide are not included in this revision history.

Modification	Item	Page	Release
Updated	Removed Flint from Importing 3D LUTs from Lustre	19	05/18/07

Related Documentation

This release has additional documentation that helps you install, configure, and use the software. The following links point to documents on the Autodesk Web site. You can also consult the Autodesk Web site directly at *www.autodesk.com/discreet-documentation*.

Consulting the Latest Version of Release Notes

Always check the Web for the most recent updates to the *Release Notes*. The information contained in this document is continuously updated and the version provided on your product CD may already be lacking important release information. You can get the latest version of all documents from the Autodesk Web site at *www.autodesk.com/discreet-documentation*.

Fixed and Known Bugs

You can consult a list of fixed and known bugs for this release and previous releases, on the Autodesk Web site at *www.autodesk.com/discreet-documentation*.

Accessing Documentation and Online Help

You can also access PDF documentation from the *Documentation* directory on the application CD and from the Preferences menu in the application.

Included with the application is an HTML online help system that is displayed in a Web browser. The online help contains comprehensive information on the full feature set of the software. You can launch the help by pressing the left **CTRL+=** key combination.

For complete information on accessing PDF and online help documentation, see the "Introduction" chapter of your application *User's Guide*.

Compatibility

Autodesk makes every effort to ensure that the compatibility of media and resources is as complete as possible when you upgrade your application, share projects between Autodesk Effects and Editing applications on both Linux and IRIX operating systems, and collaborate with Autodesk compositing and modeling applications such as Autodesk Combustion®.

Complete compatibility exists between Effects or Editing applications of the 2007 release and upwards.

For information on compatibility with releases that pre-date the 2007 version of your application, see the "Compatibility" chapter of your application's *User's Guide*.

Contacting Customer Support

You can contact Autodesk Media and Entertainment Customer Support at *www.autodesk.com/support*. Refer to the following table for additional contact information.

Location:	**Contact Information:**
Within the Americas:	Hotline (North America): 1-800-925-6442 Direct dial: 415-507-5256 (Country code = 1) 8 AM to 8 PM EST Monday to Friday, excluding holidays *me.support@autodesk.com*
Within Europe, Middle-East and Africa:	Hotline (from London, UK): +44-207-851-8080 9 AM to 5:30 PM (local time) Monday to Friday, excluding holidays *me.emea.support@autodesk.com*
Within Asia Pacific: (Excluding India, China, Australia, New Zealand and Japan)	Hotline (from Singapore): +65-6555-0399 9 AM to 6 PM (local time) Monday to Friday, excluding holidays *me.support.singapore@autodesk.com*

Overview

This chapter describes important installation-related and hardware-related notes and procedures.

Licensing Requirements

No New License Required for Service Pack 4

All users with a valid 2007 license are entitled to download and install this service pack. The 2007 license is sufficient to run 2007 SP4.

No New License Required for Already Licensed Extensions

The extension license that was issued to users on subscription with the SP3 Extension 1 release remains valid for the SP4 release. Users on subscription who have not requested thier extension license must do so, in order to enable the extension features in the SP4 release. Below is an example of an extension license.

```
smoke_x86_64_2007_x1 discreet_l 2007.999
```

NOTE: "`x1`" signifies that this is an extension license.

To request a license code, and for more information on licensing your application, see the *Software Installation Guide* for your operating system.

Operating System Requirements

Upgrading From a 2007 Release

When upgrading from a 2007, 2007 SP1, 2007 SP2 or 2007 SP3 release of your Effects or Editing application, to the 2007 SP4 release, no operating system upgrade is required.

Upgrading From a pre-2007 Release

When upgrading from a pre-2007 release of your Effects or Editing application, all platforms require an operating system upgrade. See the following lists for operating systems requirements for your platform.

Linux Systems

Autodesk Editing and Effects 2007 applications run under Red Hat® Enterprise Linux WS 4, Update 2 (64-bit or 32-bit) on IBM® workstations, and Red Hat Enterprise Linux WS 4, Update 3 (64-bit) on HP workstations. Upgrading from a pre-2007 version of an Effects or Editing application requires a fresh installation of the Linux operating system (you cannot upgrade to Red Hat Enterprise Linux WS 4, Update 2 from a previous version). A fresh installation of Linux erases the contents of the system disk so you must archive any user settings, project settings, and media that you want to preserve, prior to performing the upgrade.

Your Linux installation media should be as follows:

- *For 64-bit systems (All HP and IBM workstations with the exception of the Zpro 6221)—Autodesk's distribution of Red Hat Enterprise Linux Workstation 4 Update 2* (IBM) or *Update 3* (HP)

  One DVD, included with your release shipment. The Autodesk distribution installs the Linux software packages required by Autodesk Effects and Editing applications; these applications will not run under the commercial distribution of Red Hat Enterprise Linux WS 4 Update 2 or Update 3. If you received a new workstation with this release, your shipment also included the CD set for commercial distribution of Red Hat Enterprise Linux WS 4 Update 2. You should not use this commercial distribution, but use the DVD distribution instead. You can use the commercial distribution to activate your Red Hat subscription if it is not already activated.

- *For 32-bit systems (Zpro 6221 only)—Autodesk's distribution of Red Hat Enterprise Linux Workstation 4 Update 2*

  A set of 4 CDs, shipped to all owners of 32-bit workstations. The Autodesk distribution installs the Linux software packages required by Autodesk Effects and Editing applications; these applications will not run under the commercial distribution of Red Hat Enterprise Linux WS 4 Update 2.

- *(32- and 64-bit systems) Discreet® Kernel Utility for Linux*

  One CD, included with your release shipment. The Discreet Kernel Utility (DKU) is a set of drivers, utilities, and a customized Linux kernel, that Autodesk Effects and Editing applications require to run.

If you do not have the correct CD or DVD distribution, contact Customer Support or your local sales representative.

For complete upgrade OS information, see the *Linux RHEW 4.0, Update 2 Installation and Configuration Guide*.

IRIX Systems

Autodesk Editing and Effects 2007 applications run under IRIX 6.5.28. If your SGI® workstation is currently running an earlier version of IRIX, you must upgrade to or install IRIX 6.5.28. Autodesk recommends upgrading only if you are currently running IRIX version 6.5.19f or above, as this is a non-destructive upgrade. Otherwise, perform a full installation of IRIX 6.5.28.

To install IRIX 6.5.28, you require the following SGI CDs:

• IRIX 6.5.28 Installation Tools and Overlays (1 of 3) August 2005—P/N 812-0818-028

• IRIX 6.5.28 Overlays (2 of 3) August 2005—P/N 812-0819-028

• IRIX 6.5.28 Overlays (3 of 3) August 2005—P/N 812-0817-028

• IRIX 6.5 Applications August 2005—P/N 812-0877-028

• IRIX 6.5 Foundation 1—P/N 812-0759-002

• IRIX 6.5 Foundation 2—P/N 812-0760-002

• ONC3/NFS version 3, for IRIX 6.2, 6.3, 6.4, and 6.5—P/N 812-0774-002

Make sure that your CDs match this list precisely. If you do not have the correct CDs, contact your SGI support representative.

For IRIX upgrade and full installation procedures, see the *IRIX 6.5.28 Installation Guide*.

DKU Version Requirement

The 2007 SP4 release of your Effects or Editing application requires the DKU version 2.1.3. If you are upgrading from 2007 SP3, this DKU should already be installed. Otherwise you must perform a DKU upgrade. For more information about installing the customized kernel on your workstations, see "Installing the Discreet Kernel Utility" in the *Autodesk Effects and Editing 2007 Linux RHEW 4(Update2 or Update 3) Installation and Configuration Guide*.

Hardware System Requirements

Linux workstations — This release fully supports all previously certified Linux workstations. However, some minor changes in video I/O connections or BIOS revision may be required if you are upgrading from a pre-2007 version of your Effect or Editing application. Consult these *Release Notes* and the *Hardware Setup Guide* for your workstation for information on BIOS requirements, connection to audio/video I/O hardware and other peripherals.

SGI workstations — This release fully supports the Octane2™ V12, Tezro™, Onyx2® (R12K), Onyx 350, and Onyx 3200 workstations. No changes in hardware configuration are required. For specifications, you can consult your existing documentation or download the *Hardware Setup Guide* for your workstation at *www.autodesk.com/discreet-documentation*.

New XR-series Stone Direct — The new XR-series Autodesk Stone® Direct storage is now available in 4Gb mode for all Linux workstations (4Gb fibre channel adapters required). XR-series is also supported in 2Gb mode on SGI workstations. Consult the *Stone Direct 2007 Configuration Guide* and the *Stone Storage Manager 2007* for information on how to connect and configure your XR-series Stone Direct.

Audio Delays for 720p with AJA-OEM-2K

Set broadcast and hi-res audio delays to 1.00 for projects with a resolution of 720p.

Audio delays are set in the Audio section of the Preferences panel. To sync audio with the broadcast monitor, select Sync To Broadcast. To sync audio with the hi-res display, select Sync To Hi-res.

For more information on setting audio delays for high resolution and broadcast monitors, refer to your application's *User's Guide*.

Emulator Behavior on HP Workstations

In order to have video I/O accuracy when using the Emulator module, you must adjust video input and output delays in the Preferences menu, as follows:

Platform	SD Input	SD Output	HD Input	HD Output
AJA with HP xw8400	1	-5	1	-5
AJA with HP xw9400	1	-5	2	-4

HDCAM-SR Repeatability on HP Workstations

On HP workstations, when using an HDCAM-SR in 720p for input/output, the PGLD parameter of the "Vtr" keyword needs to be set to '99'.

You can adjust the "Vtr" keyword in the software initialization file (*init.cfg*). For more information about the keywords in *init.cfg*, consult the *Configuration File Reference Guide for Linux Workstations*.

Varicam Video I/O Firmware Versions

To perform frame-accurate video input and output using Panasonic® variable frame rate VTR decks, you must use the following firmware versions:

- AJ-HD3700H D5-HD deck:

  SYSCON: 1.04 or later

  AV: 0.21 or later

  FRONT: 0.13 or later

- AJ-HD1200A DVCPRO HD deck:

  SYSIF: 1.30 or later

  AVDV: 1.39 or later

SERVO: 1.22 or later

Regular video I/O is not affected by a firmware version.

NOTE: Refer to your Panasonic operational for information on verifying the firmware version.

About Data Archiving Devices

For data archiving, your Effects or Editing 2007 application uses standard UNIX tape device calls. You should confirm with device vendors that they are certified for use with your operating system. For this release, the operating systems required are Linux Red Hat Enterprise Workstation 4.0, Update 2 (for IBM workstations) or Update 3 (for HP workstations), and IRIX 6.5.28.

You should also note the following guidelines:

- On IRIX, you may be required to purchase tape device driver support from SGI to use SCSI or fiber channel archiving devices.
- On Linux, fibre channel devices that may be used are the ones for which the vendor confirms the following:
  - The device driver is compliant with standard UNIX tape device calls.
  - The specific version of your operating system and kernel is supported.
- While Autodesk Media & Entertainment makes no certification statement about any device, the following SCSI devices have been tested and found to be reliable when connected using an ATTO Fibre Channel to SCSI Bridge 2390:
  - Quantum LT03
  - Quantum DLT8000
  - Quantum DLT7000
  - Sony AIT3 SDX-D700C
  - Sony AIT2
- The software initialization file (*init.cfg*) for your Effects or Editing 2007 application contains examples for the "ClipMgtDevice Tape" keyword to help you set up the appropriate block size value for your tape device and define a text label to identify the device in the Archiving module. Please refer to the documentation from your archiving device vendor for guidelines on the actual block size to use.
- On Linux workstations, you can also use USB 2 and FireWire® (IEEE 1394) attached devices to save data archives generated from your Effects or Editing application. These devices can be formatted as ext2, ext3 or Mac® file systems. NTFS is not supported.

Enabling InfiniBand Drivers on Linux Workstations

InfiniBand (IB) drivers are now certified for IBM 6217SC/DC, HP xw8400 and HP xw9400 workstations. The drivers are installed on all Linux workstations by the DKU. If the DKU detects the IB hardware, the chkconfig flag for IB drivers is set to ON. If you add an optional IB HBA after the DKU was initially installed, the chkconfig flag for the IB drivers will not be properly set.

The following procedures describe how to use the InfiniBand configuration utility to set the chkconfig flag to ON for the IB drivers and configure the IP address and netmask of your Infiniband interface.

To enable the chkconfig flag for IB drivers on a Linux workstation:

1. Open a shell and log in as root.
2. Start the InfiniBand configuration utility. Type:

   `/sbin/iba_config`

   The InfiniBand configuration utility menu appears:

```
SilverStorm Technologies Inc. InfiniBand 3.2.0.2.1G Software
1) Show Installed Software
2) Reconfigure IP over IB
3) Reconfigure Driver Autostart
4) Update HCA Firmware
5) Generate Supporting Information for Problem Report
6) Host Setup via Fast Fabric
7) Host Admin via Fast Fabric
8) Chassis Admin via Fast Fabric
9) Uninstall Software
X) Exit
```

3. Open the Reconfigure Driver Autostart menu. Type:

   3

4. When you have completed the configuration, exit the InfiniBand configuration utility. Type:

   X

5. You must restart your workstation for your changes to take effect.

After rebooting, launch the InfiniBand configuration utility again to configure IP over IB.

To configure the IP address and netmask of your IB Interface:

1. Open the Reconfigure IP over IB menu. Type:

   2

2. Follow the on-screen instructions to configure the IP address and netmask of your Infiniband Interface.

   You return to the main menu when you have completed the configuration of the IP address.

3. When you have completed the configuration, exit the InfiniBand configuration utility. Type:

   x

4. You must restart your workstation for your changes to take effect.

Configuring Wire with Infiniband

To allow Wire transfers over an Infiniband network, you must define a new interface of type PROT=IB_SDP in the [INTERFACE] section of the Wire *sw_framestore_map* file, as in the following example:

```
[FRAMESTORES]
FRAMESTORE=london HADDR=177.20.15.53 ID=30

[INTERFACES]
FRAMESTORE=london
PROT=IB_SDP   IADDR=192.16.129.32  DEV=1
PROT=TCP   IADDR=177.20.15.53  DEV=1
```

Make sure that the IP address you assign to the Infiniband interface (that is, the one defined on the line beginning with PROT=IB_SDP) is not the same as the IP address defined for the host (that is, the one defined by HADDR=). Doing otherwise would send the house network traffic through the Infiniband interface and would impair Wire transfers.

NOTE: In the [INTERFACES] section, the interfaces are listed in order of preferences. In the example above, the IB_SDP interface is the preferred one, which means that Wire will attempt to contact other hosts with this interface first.

Documentation Erratum — Details about configuring the *sw_framestore_map* can be found in the *Autodesk Stone & Wire 2007 Filesystem and Networking Guide*. On page 41 of this guide, the *sw_framestore_map* example provided is currently erroneous, as it assigns the same IP address to both the Infiniband and the host interfaces.

Infiniband Configuration for Burn

Burn nodes can now be configured with an optional QuickSilver InfiniServ 7000 HCA. The drivers for this adapter are included in the latest Burn 2007 package, under the */Burn_2007_SP1_LINUX64_RHEL4/ib* directory. This directory also includes a *README* file with instructions on how to install the drivers and configure your Infiniband™ interface.

NOTE: These drivers are compatible with Red Hat Linux Enterprise 4.0 Update 2 or Update 3. Other operating systems are not supported at this time.

Init Keywords for Background Wire and Proxy Generation

To enable Background Wire and the new Background Proxy Generation functionality, you must ensure that the following keywords are un-commented and configured in the application's software initialization file *init.cfg*.

- `BackburnerManagerHostname <hostname>`
- `BackburnerManagerPort 3234`
- `BackburnerManagerHostname 50`
- `BackburnerManagerHostname <groupname>`

If these keywords are not enabled (that is: commented out), the buttons Bg Proxy and Bg Wire are grayed out in the application's library module.

For more information about the keywords in *init.cfg*, consult the *Configuration File Reference Guide for Linux Workstations*.

NOTE: As a prerequisite for this functionality, a Backburner manager system must be enabled on the network. For information on how to setup a Backburner Manager system, consult the *Autodesk Backburner 2007.1 Installation Guide*, and the *Autodesk Backburner 2007.1 User's Guide.*

Cleaner XL 1.5.2 Updater Available

This upgrade is available online at *www.autodesk.com/support*. To download the upgrade, select Autodesk Cleaner® XL from the drop-down list, click Data & Downloads, then click Updates & Services Packs. For information on setting up Cleaner XL network encoding, see the *Software Installation Guide* for your workstation.

NOTE: You cannot install the Cleaner XL 1.5.2 upgrade without having installed Cleaner XL 1.5 first.

Linux vs. IRIX Product Characteristics

The following table lists the specific Linux and IRIX characteristics for the current version of your Effects or Editing application.

Feature	IRIX	Linux
Audio		
• VST® audio Sparks®	Supported	Not supported
• Apply audio trim levels to monitoring during capture	Supported	Not supported
• AES and analog audio in/out tracks	4x AES audio in 8x AES audio out 8x Analog in/out	8x AES audio in 8x AES audio out 8x Analog in/out
• Embedded Audio	Not supported	Supported
Video		
• 1035i video format	Supported	Not supported
• NTSC/PAL cross synchronization with HD reference	Supported	Not supported **NOTE:** Must use TL sync for HD output
Media Import and Export		
• Video file format: MPEG-1 and AVI	Supported	Supported with the Extension 1 license **NOTE:** See the *New Features Guide* for your extension release
• Audio file format: MPEG-1, MP3, Sound Designer, Audio Visual Research, Creative Labs VOC, Sample Vision, Sound Font2	Supported	Supported with the Extension 1 license **NOTE:** See the *New Features Guide* for your extension release
Graphics to Video Preview		
• Number of frames delay	<1	2
Storage		
• Framestore capacity	8 TB	8 TB
• Software parity disk	Supported	Not supported
• 4 Gbit technology	Not supported	Supported
• 2 loop / 4 loop	4 loop	4 loop
• HIPPI support	Supported	Not supported
• Infiniband HBAs	Not supported	Supported
SCSI archiving devices	Supported	Not supported **NOTE:** see "About Data Archiving Devices" on page 12

3 User's Guide Addendum

Summary

Audio Preferences 17
Creating a Soft Resize to Relink or Recapture Media of Different Resolutions 18
Enabling Audio On Linux Systems 18
FBX 2006.11 Support 18
Image Sequence Name Change on Publish 19
Importing XML Files From FCP 19
Importing 3D LUTs from Lustre 19
Lucid 88192 Audio Processor on Linux Systems 19
Merging Pyramix OMF Files 19
Minor Changes to Import Image/EDL Menu 19
New Media Import and Export Features for DPX Files 21
New Hot Keys 22
QuickTime CODEC Support for Linux: Errors in the New Features Guide 22
Setting Block Size on Tape Devices 22
Working with Remote Framestores on Backdraft Conform 23

Audio Preferences

Fire, Smoke and Backdraft Conform 2007 ship with the Lucid 88192 converter, which supersedes the Lucid 8824 converter. Use the Lucid ADAT procedures found in your application's *User's Guide*, with the exception of the following.

- The Lucid 88192 does not use SPDIF connectors and consequently any SPDIF option in an audio preference has no effect.
- Although you can enter any value in the range -96 to +31 for the analog output gain, the Lucid 88192 converter works with only two values (-10 dBV and +4 dBu). Values in the range -96 to 0 (not including 0) map to -10 dBV. Values in the range 0 to +31 map to +4 dBu (professional level).

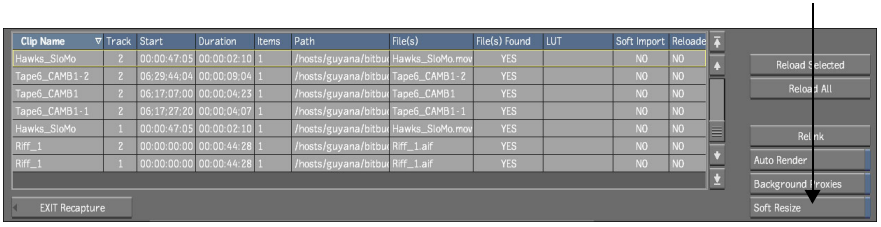
Creating a Soft Resize to Relink or Recapture Media of Different Resolutions

For Extension 1 customers, a Soft Resize button has been added to the Relink and Recapture menus in the Clip Library Tools menu. Enable this button to relink media to clips or recapture media when the resolution of the media and the metadata in the clips differ.

For example, the default resolution of NTSC frames from our Editing and Effects applications is 720x486, but DV encoded NTSC media originating from other applications is 720x480. To relink 720x486 clips to 720x480 media, you must apply a soft resize.

• Location of the Soft Resize button in the Relink menu

• Location of the Soft Resize button in the Recapture menu



For more information on unlinking and relinking and recapturing media, see your *User's Guide*.

Enabling Audio On Linux Systems

On a Linux system with a DVS or AJA video I/O card, you must specify the Video keyword in the software initialization configuration file, *init.cfg*, in order for the audio to be available. The corresponding warning message appears if you fail to specify the Video keyword, and the audio functionality becomes disabled.

FBX 2006.11 Support

This release now supports FBX® version 2006.11.

Image Sequence Name Change on Publish

When you publish a clip, the stored image sequence files no longer contain *_published* in the names.

For example if you publish a DPX sequence, you will now get these two things:

- A new clip in the library, named <*clip name*>*_published*, which references the published image sequence.
- An image sequence at your destination, where file names are <*clip name*>.######.*dpx*.

  Previously, the image sequence would have been named <*clip name*>*_published.######.dpx*.

Importing XML Files From FCP

You can import XML files from Apple® Final Cut Pro® running on both PowerPC™ and X86 (Intel®) platforms.

Importing 3D LUTs from Lustre

3D LUTs created in Lustre can now be imported into Fire, Smoke and Backdraft Conform2007. The extension must be changed from *.lut* to *.3dl*.

Lucid 88192 Audio Processor on Linux Systems

On Linux systems, the Lucid ADA 88192 converter produces audible clicks and pops when it initializes on application start-up, when you enter I/O modules, at post roll of a clip output, and when you toggle the Input Source box from AES to Embedded.

Merging Pyramix OMF Files

OMF files generated from Fire, Smoke, and Backdraft Conform can now be opened with the Merging Pyramix application.

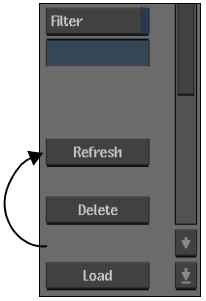
Minor Changes to Import Image/EDL Menu

Some user interface changes were made to the Import Image and EDL Preferences menus.

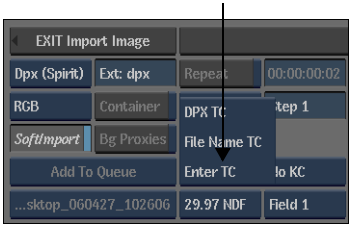
Import Image

The following changes have been made to the user interface in the Import Image menu:

• The Refresh button has been moved up.



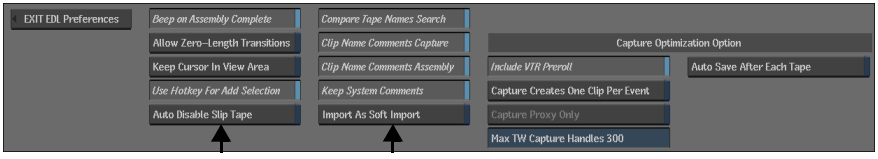
• Start TC is now called Enter TC.



• File KC is now called DPX KC, and Use KC is now called Enter KC.

EDL Preferences menu

In the EDL Preferences menu, two columns of buttons have been moved up one row:



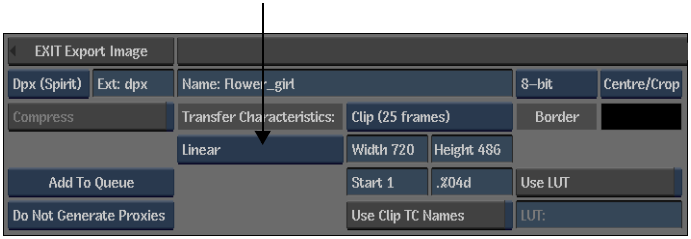
New Media Import and Export Features for DPX Files

- Upon import of a DPX file, the frame rate box now has an option called “file FCM” which will detect and use any existing frame rate information in the DPX file to create the clip.
- Upon import of DPX, Wavefront, or Softimage images, the aspect ratio data is now read correctly from the files.
- DPX files can now be exported as 12-bit clips.
- When exporting or publishing a DPX file, the application will now write “Autodesk” instead of “Discreet” in the manufacturer field of the DPX file header.
- When you disable the *Resize* button during import/export operations, the aspect ratio of the clip reverts to default.
- Background I/O now continues to completion even after you exit the application.
- Video clips can now be resized when exported in the Background.

DPX Transfer Characteristics

When exporting DPX files, you now have the option of choosing a DPX Transfer Characteristic from the Transfer Characteristics option box. A DPX Transfer Characteristic is an information flag that is stored in the DPX image file header. It identifies the attributes associated with a particular film or video format, such as resolution, frame rate, and colour space.

Setting a Transfer Characteristic in no way changes the image information stored in the DPX file. The Transfer Characteristic is simply a flag that is used to indicate the attributes of the DPX file to another device or application. Some devices or applications may take advantage of this information to improve workflow. For example, selecting Logarithmic can allow a film recorder to adjust its parameters to print film-originated DPX files with the correct densities.



Although the SMPTE 268M standard defines a number of DPX Transfer Characteristics, it does not provide usage specifications for them. As a result, most of these Transfer Characteristics are not generally used in the industry. The table below explains the known and commonly used Transfer Characteristics.

Select:	In the following cases:
Unspecified	Format is not specified.
Logarithmic	Typically used by negative film scanners that record status M densities.
Linear	Often used for video images which have built-in gamma correction, but refers to images having a true linear quantization scheme (such as CG-originated material).
Printing Density	Can be used for negative film scans which use the SMPTE Printing Density settings. SMPTE Printing Densities use status M density measurements with a higher gain in the red component.

New Hot Keys

The following table lists hot keys introduced in this release.

These hot keys are not compatible with the previous release. To use these hot keys, you must create a new user.

Operation	Hot Key
Pan in Text module	**CTRL+SHIFT+SPACEBAR** and drag
Zoom in viewports	**CTRL+SPACEBAR** and drag **NOTE:** In a module's animation view, the new zoom hot key replaces the **ALT** hot key.
Switch between straight and Hermite lines in Clip History	**SHIFT+CTRL** and click

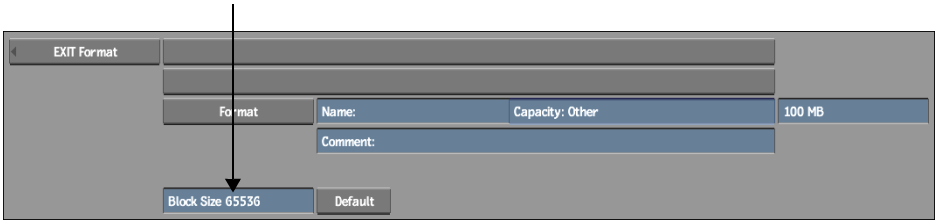
QuickTime CODEC Support for Linux: Errors in the New Features Guide

There are errors in the list of supported QuickTime CODECs in the *New Features Guide* installed with the Extension 1 release. For the updated list, please see the latest versions of the *New Features Guide* in the documentation library:

- *ftp://ftp.discreet.com/pub2/doc/Inferno_Flame_Flint2007Ext1_New_Features.pdf*
- *ftp://ftp.discreet.com/pub2/doc/Fire_Smoke_BConform2007Ext1_New_Features.pdf*

Setting Block Size on Tape Devices

Due to a Linux driver limitation, when archiving to tape, the system cannot determine the tape block size. To work around this limitation, use the Block Size field in the Tape Format menu to set the proper block size before opening the tape archive.



Working with Remote Framestores on Backdraft Conform

You can use a remote (network-accessed) framestore to store clips with Backdraft Conform. This allows you to use Backdraft Conform without local storage.

NOTE: Real-time performance and clip input/output operations depend on network and storage bandwidth. Connecting Backdraft Conform (especially multiple seats) increases the load on the network, so connect any other fibre-channel connections to a single Stone volume.

To ensure Backdraft Conform initializes using the remote framestore, you must configure the application by editing the FrameStore keyword in the software initialization configuration file.

To configure a remote framestore on Backdraft Conform:

1. Open the software initialization configuration file, *init.cfg,* in a text editor.
2. Navigate to the FRAMESTORE DEFINITION section.
3. The FrameStore keyword is usually configured to point to a local Stone filesystem volume, for example, `stonefs` or `stonefs1`. Edit the FrameStore keyword to point to a remote Stone filesystem volume:

   ```
   FrameStore stonefs/<host name>
   ```

   Where <host name> is the host to which the Stone volume you want to initialize is attached.

   NOTE: Only Discreet Storage is supported and only one example (local or remote framestore selection) can be un-commented at a time.

4. Save and close the software initialization configuration file.
5. Launch Backdraft Conform.

   The list of hosts appears, containing an entry for the Backdraft Conform local host. If you select this option, a message appears indicating that no Stone is available for the selected host.

6. Choose the remote Stone you want to work with for the session.

If you launch Backdraft Conform with the FrameStore keyword configured to point to a local Stone volume, the application fails to launch (an error message appears).

For more information on starting Backdraft Conform, see the "Managing Projects and Users" chapter in your *Autodesk Backdraft Conform 2007 User's Guide*.

4 Installation Documentation Workflows

Summary

Overview *25*
Reinstalling from Scratch *25*
Connecting New or Expanded Stone Direct Storage *26*
Upgrading Your Effects or Editing Application *27*
Upgrading Your Operating System *28*
Which Document Do I Need *28*

Overview

Your Autodesk Effects or Editing System is shipped preconfigured with the appropriate operating system and application already installed. In normal situations, the final configuration procedures are simple and well documented. In certain instances, you may be required to perform partial or complete reinstallation of some system components. Such instances might include a hardware or software upgrade, or an exceptional recovery procedure.

It is always recommended to identify and gather all relevant documentation before you proceed with these more involved configuration procedures.

This chapter highlights four of the more common installation workflows that you may need to perform on your Effects or Editing system. It also lists the documentation relevant to each step in each workflow.

Reinstalling from Scratch

Perform the tasks described in this workflow in cases where you need to rebuild your Effects or Editing system in its entirety, from cross-connecting the hardware peripherals and storage arrays, to installing the operation system, and installing, licensing, and configuring your Effects or Editing application.

To reinstall your system from scratch:

1. Prepare for the installation.

   Consult the latest *Release Notes* for your release before your begin any installation. They contain the most current and updated information about requirements, late-breaking features and procedures, as well as a detailed list of all updated related documents and URLs to download the documents directly to your workstation.

2. Connect your workstation's hardware peripherals.

   Consult the *Hardware Setup Guide* for your workstation.

3. Install the operating system and the DKU.

   Consult the *Installation and Configuration Guide* for your operating system.

4. Connect your storage.

   Consult the *Autodesk Stone Direct Configuration Guide* for your release.

5. Configure the RAID volumes and mount the storage.

   Consult the *Autodesk Stone Direct Configuration Guide* for your release.

6. Install and license your Effects or Editing application.

   Consult the *Software Installation Guide*.

7. Configure your Stone filesystem.

   Consult the *Autodesk Stone and Wire Filesystem and Networking Guide* for your release.

8. Configure your application settings.

   Consult the *Configuration File Reference Guide* for your operating system.

9. Get going.

   Read the *User's Guide*, *What's New*, and *Hot Keys Reference Guide* to get familiar with your Effects or Editing application's powerful features.

Connecting New or Expanded Stone Direct Storage

Perform the tasks described in this workflow in cases where you need to rebuild your Autodesk Effects and Editing workstation's Stone Direct storage array. For instance, this could happen when you purchase supplementary storage enclosures to expand available disk space.

To connect new or expanded Stone Direct storage:

1. Prepare for the installation.

   Consult the *Release Notes* for your release before your begin any installation. They contain the most current and updated information about requirements, late-breaking features and

procedures, as well as a detailed list of all updated related documents and URLs to download documents directly to your workstation.

2. Connect your storage.

   Consult the *Autodesk Stone Direct Configuration Guide* for your release.

3. Configure the RAID volumes and mount the storage.

   Consult the *Autodesk Stone Direct Configuration Guide* for your release.

4. Configure your Stone filesystem.

   Consult the *Autodesk Stone and Wire Filesystem and Networking Guide* for your release.

5. Get going.

   Read the *User's Guide*, *What's New*, and *Hot Keys Reference Guide* to get familiar with your Effects or Editing application's powerful features.

Upgrading Your Effects or Editing Application

Perform the tasks described in this workflow in cases where you need to install or upgrade your Effects or Editing application. Typically, upgrading the application does not require the Stone filesystem to be reformatted or the operating system to be upgraded.

To upgrade your operating system:

1. Prepare for the installation.

   Consult the *Release Notes* for your release before your begin any installation. They contain the most current and updated information about requirements, late-breaking features and procedures, as well as a detailed list of all updated related documents and URLs to download the documents directly to your workstation.

2. Install and license your Effects or Editing application.

   Consult the *Software Installation Guide* for your operating system.

3. Configure your application settings.

   Consult the *Configuration File Reference Guide* for your operating system.

4. Get going.

   Read the *User's Guide*, *What's New* and *Hot Keys Reference Guide* to get familiar with your Effects or Editing application's powerful features.

Upgrading Your Operating System

Perform the tasks described in this workflow in cases where you need to upgrade your operating system. For instance, this could be required by a new version of your Effects or Editing application. Typically, upgrading the operating system does not require the hardware components to be rewired or the Storage RAID devices to the reconfigured.

To upgrade your operating system:

1. Prepare for the installation.

   Consult the *Release Notes* for your release before your begin any installation. They contain the most current and updated information about requirements, late-breaking features and procedures, as well as a detailed list of all updated related documents and URLs to download the documents directly to your workstation.

2. Install the operating system.

   Consult the *Installation and Configuration Guide* for your operating system.

3. Install and license your Effects or Editing application.

   Consult the *Software Installation Guide* for your operating system.

4. Configure your Stone filesystem.

   Consult the *Autodesk Stone and Wire Filesystem and Networking Guide* for your operating system.

5. Configure your application settings.

   Consult the *Configuration File Reference Guide* for your operating system.

6. Get going.

   Read the *User's Guide*, *What's New* and *Hot Keys Reference Guide* to get familiar with your Effects or Editing application's powerful features.

Which Document Do I Need

Here are a few examples of common installation enquiries, and the documentation that provides the answers to each.

I would like to request a license for Smoke

Consult the *Software Installation Guide* for installation procedures and information on obtaining and installing the licenses required to launch the Effects or Editing application.

Do I connect the DVI ramp to serial port #1 or serial port #2

Consult the *Hardware Setup Guide* for your workstation for diagrams and guidelines on how to connect the hardware peripherals and video I/O components to your workstation.

I need to reformat my Stone FS partition

Consult the *Autodesk Stone and Wire Filesystem and Networking Guide* for procedures on how to create and mount the Stone filesystem.

I want to learn about the latest updates

Consult the *Release Notes* for your release. They contain the most current information about requirements and procedures, as well as a complete list of up-to-date related documents and URLs to download the documents directly to your workstation.

I want to know about all the new features for this release

Read the *What's New* for your Effects or Editing application for an overview of new features. For complete new feature information, consult the *User's Guide* for your application.

I need to upgrade the DKU

Consult the *Installation and Configuration Guide* for your operating system, for procedures on how to install the Linux operating system and DKU, or the IRIX operating system and required patches.

I would like to download the latest documentation

Consult the *Release Notes* for your release for a complete list of up-to-date related documentation and URLs to download the documents directly to your workstation.
